A. Title: Developmental expression of the genes encoding transforming growth factor alpha

A. Reference number: 158134; MUID:95124501

A. Accession: 178541

A. Status: preliminary; translated from GB/EMBL/DDBJ

A. Molecule type: mRNA

A. Molecule: 1-67 CRES

A. Cross-references: GB:S75918; NID:9912831; PIDN:AAB33096.1; PID:9912832

C. Superfamily: gonadoliberin

Objection of precursor - chicken
NiAlternate names: gonadotropin-releasing hormone I
C;Species: Gallus gallus (chicken)
C;Date: 21-Feb-1997 #sequence_revision 21-Feb-1997 #text_change 16-Jul-1999
C;Accession: I50644; S33507
C;Accession: I50644; S33507
C;Accession: I50644; MulD: 94089; Light H.M.
J. Mol. Endocrinol. 11, 19-29, 1993
A;Title: Characterization of the chicken preprogonadotrophin-releasing hormone-I gene A;Recession: I50644; MulD: 94089355
A;Status: translated from GB/EMBL/DDBJ

The claimed peptide antagonists inhibit the release of gonadotrophins and/or steroids. They are antagonistic to GnRH, inhibit ovulation, and may cause resorption of a fertilised egg if administered shortly after absorption. The peptides also have utility in male contraception, and in treatment of precoscious puberty, hormone dependent neoplasia, dysmenorrhoea and endometriosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Peptide inhibits the release of lutenising hormone releasing hormone.
                                                     The gonadotropin releasing hormone and its analogues are prepd. by a new multistage rapid peptide synthesis method in soln., where the intermediates are not isolated. The process is rapid and gives very pure peptide quickly and using little equipment. The peptide can be used in veterinary medicine to synchronise ovulation in large animal herds, and in human medicine in the treatment of fertility disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Analogues (I) of the sequence pref. have amino acid (AA) substitutions at posns. 2 (his is replaced by a D-AA) and 6 (gly is replaced by a D-AA). A therapeutically effective amt. of such an antegonist is contained in a pharmaceutical compsn. alongside a menopausal symtom-alleviating amt. of a 19-nor progestational agent (II) (pref. both in single formulation). The compsn. is pref. administered masally in dosages of 0.01-1 mg/Kg/day for (I) and 0.02-0.07 mg/Kg/day for (II). May be used for inhibition of ovulation, and treatment of eg endometriosis, breast cancer, polycistic
                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                               Compsn. comprising LHRH-antagonist and 19-nor progestational agent for treating female gynaecological disorders based on gonads steroid producn.
                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This luteinising hormone releasing hormone (LHRH) agonist has either a ketomechrylene or dihydroketomethylene ap. replacing the amide linkage between residues 9 and 10 in LHRH. This results in an increase in oral activity. It is useful for eg male and female contraception, treatment of precocious puberty and endometriosis and treatment of breast- and prostate tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                        Orally active luteinising hormone-releasing hormone peptide analogues - have keto:methylene or hydroxy:ethylene in place of amide between proline(9) and glycine(10)
                                                                                                                                            10..10

which possesses high antiovulatory and antineoplastic activity, is free of anaphylactorid side effects and is believed to be free of endematogenic effects. The peptide may be used to treat precocious puberty, hormone dependent tumours, e.g. malignant and benign prostate tumours, e.g. secondary amenorrhoea, endometriosis and covarian and mammary cystic diseases. The peptide is also useful for requiating ovulation e.g. as precoital or postcoital contraceptives, for synchronising oestrus in livestock and for improving the "raythum" method. It is also useful for requiating to anopausal and postmenopausal periods. As it suppresses the spermatogenesis and testosterone levels in males, it may be of petential use for male contraception.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The C-terminal residue (Gly-CO-NH2) can be replaced by ethylamide. This peptide and fragments of it (i.e. amino acids 4-10, 5-10, 6-10 and 7-10) are agonists and antagonists of LHRH. They are useful for treating e.g. precocious or delayed puberty, psychiatric disorders esp. those of the libido or sexual aggression, etc. In addition they are useful for functional exploration of the hypothalamus-hypophyseal axis and for radioimmunological or biological assay (of LH, FSH and steroid levels) in biological fluids and biopsy samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                         New peptide homologous with luteinising hormone-releasing hormone - used to treat gynaecological conditions, cancer of gonads and sec. sexual organs, psychiatric conditions and in assays
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New deca:peptide luteinising hormone-releasing hormone antagonists - for treating precocious puberty, hormone dependent tumours, endometritis, cystic diseases; also as contraceptive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Luteinising hormone; LHRH; hypothalamic; antiovulatory; tumours; antineoplastic; precocious puberty; ovulation; contraceptive.

Gonadotropin releasing hormone; GnRH; motility disorder; functional bowel disease; leuprolide acetate; luteinising hormone; progesterone; relaxin; autonomic nervous system; drug delivery; therapy; irritable bowel syndrome; diabetes; scleroderma; Parkinson's disease.
       to the resin via a photosensitive linker. The nonapeptide is cleaved from the resin by photolysis, the C-terminal is activated, and the product is coupled with glycinamide to add the Gly-NH2. The decapeptide is then deprotected. In the decapeptide, xaa is Gly (giving gonadorelin; the present sequence), D-2-Nal or D-Trp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents naturally occuring gonadotropin releasing hormone (GnRH). Analogues of GnRH are represented by AAR86846-56. Woillity disorders, including functional bowel disease, can be treated by the administration of one of the GnRH analogues shown here (e.g. leuprolide acetate). This is due to the GnRH analogue inhibiting production of reproductive hormones such as lutenishing hormone, progesterone and relaxin. Moillity disorders are caused from abnormalities of the autonomic nervous system. Due to this, the GnRH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Treating motility disorders associated with systemic lupus erythematosus - by admin. of gonadotropin releasing hormone analogue, to control nausea, vomiting, abdominal pain etc.

0
which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse HLA phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Yersinia. Spacer amino acid sequences (e.g. Gly-Gly) can be provided between the invasin and Th domains and between the immune stimulator and hapten components. When the hapten is LHRH, then optionally the invasin domain The present sequence represents an LHRH hapten which can be attached to the stimulator to provide a potent vaccine for
                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A new method is provided for preparing a decapeptide of formula pGlu-His-Trp-Ser-Tyr-Xaa-Leu-Arg-Pro-Gly-NH2, in which a protected nonapeptide corresponding to the N-terminal of the peptide is first prepared on a benzhydrylamine resin, the Pro residue being attached

analogues may also exert effects on the autonomic nervous system. The GRRH analogues are administered by injection (which may be intavenous, subcutaneous or intramuscular), or by a drug delivery system. The drug delivery system can comprise a drug implant with timed release, a nasal spray or an injection of a long-lasting depo form. This method is used to alleviate symptoms such as nausea, vomiting, abdominal pain and altered bowel habits. The sequences can be used to treat motility disorders in a wide variety of other diseases including irritable bowel syndrome, diabetes, scleroderma and Parkinson's disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 6, App. Sequence 18, App. Sequence 1, App. Sequence 6, App. Sequence 77, A Sequence 77, A Sequence 11, App. Sequence 17, A Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         qq
A; Molecule type: protein
A; Residues: 1-10 <BUR>
A; Note: the natural and synthetic hormones have the same biological activity
C; Comment: This Hypothalamic hormone stimulates the secretion of both luteinizing and ;fo
C; Superfamily: gonadoliberin
C; Reywords: amidated carboxyl end; hormone; hypothalamus; pyroglutamic acid
F; 1/Modified site: pyrrolidone carboxylic acid (Gln) #status experimental
F; 10/Modified site: amidated carboxyl end (Gly) #status experimental
